

MenoEaze

Menopause can threaten the quality of life for women. It disturbs all aspects of a woman's life and affects 25 million women annually worldwide. WHO (World Health Organization) estimates that 1.2 billion women will be postmenopausal by 2030 [1].

With a variety of symptoms such as hot flashes, night sweats, genital problems including vaginal dryness, dysuria and urinary disorders, joint and muscle pain, skeletal, heart problems and cardiovascular disorders, memory problems, mood disorders and depression it is easy to see why women would want relief of these symptoms.

Afrigen Menopause Spray is a combination of natural ingredients with the least side effects that may reduce most symptoms associated with menopause.

Many natural ingredients can be effective in improving menopausal symptoms. For example, Chamomile, Saffron and California poppy may alleviate hot flashes, restlessness or disturbed sleep. Saffron is effective in relieving depression because it is a mood modifier, as well as improving heart and vascular problems and sexual dysfunction in menopausal women [1].

Diindolylmethane (DIM) can potentially serve as an antiestrogenic dietary supplement [2].

Menopause oral spray is easy to administer, accurate, practical, discreet and effective. All it takes is just a quick spray for the fast relief from menopausal symptoms.

This unregistered medicine has not been evaluated by the SAHPRA for its quality, safety or intended use.

Manufactured by: Afrigen Biologics (Pty) Ltd
Address: Unit 5, Kestrel Park, Longclaw Drive
Montague Gardens, Cape Town, 7441
